Profile

iOS and Web. Development and design.

I am a driven and outgoing person who is always planning for the next thing to do. My attention to detail makes me do the things I am passionate about very well. I find myself seeking new experiences and the valuable lessons that come with them. As these new experiences often involves working with new people, I have found that I work very well in groups, my problem solving capabilities often improve greatly when I have someone to talk about ideas with.

I am extremely interested in new technology-based products and the entrepreneurial drive behind many of these innovations inspires me.

Work Experience

Independent Consulting
Stockholm 2014-present
I started my own business in Spring 2014 in which I, as the sole proprietor, handle accounting and bookkeeping, which was somewhat new to me. As of now I'm working on projects for Splunk and will take on other contract work if the work interests me.

Big Data Intern, Splunk
San Francisco 2013
I worked full time as a paid intern at Splunk's headquarters for 7 months. I learned to use the Splunk Search Language and writing apps for the Splunk platform. I worked with JavaScript and also created two implementations of a mobile app, one using web technologies and the other using Objective-C for iOS.

System developer, NGM, Nordic Growth Market
Stockholm 2011-2013
I worked part-time as a developer of NGM's trading system. The system is written in Java and relies on the FAST/FIX protocol for financial information exchange. My work also includes development of some of NGMs web systems, which includes Google Web Toolkit (GWT) and Ruby on Rails.

Teachers assistant, KTH Royal Institute of Technology
Stockholm, Fall of 2011
I corrected assignments and helped students in the Programming Paradigms course. The course includes functional programming in Haskell and logic programming in Prolog.

Date of birth June 25, 1989

System developer, NTI-skolan/MATH.se
Stockholm, Summer of 2011
I worked on an online learning system written in ASP, the work consequently included VBScript, JavaScript and T-SQL.

Teachers assistant, Södertörn University
Stockholm, Spring of 2011
I helped students with their assignments in an introductory course in programming. I learned a lot about explaining concepts that were trivial to me but not to the new students. Seeing the students progress was really rewarding.

Telephone operator, Taxi Stockholm
Stockholm, Spring of 2010
I worked Saturday nights taking orders for Taxi trips. It was stressful, but I learned to handle customers under pressure.

Commissions of trust

Project leader of the reception of new students
Konglig Datasektionen (Computer Science Chapter), 2012
I was the leader of the management group of the reception of new students, which welcomes 200 new computer science students each year. The work included recruitment of the management group, recruitment of the regular members and regular meetings with school administration. I also had the responsibility to see that our budget was followed (the annual turnover is ~$100000). I led the ongoing planning and also the execution of the events during the reception.

Member of the student parliament
Tekniska högskolans studenkår (Student Union of KTH), 2011-2012
I was elected to be a part of the student parliament which govern the work of the student union.

Member of the management group of the reception of new students
Konglig Datasektionen (Computer Science Chapter), 2011
I was part of the management team, which handled the direct management of the regular members in their tasks. We recruited ~50 regular members to aid us during the reception.

Member of the reception of new students
Konglig Datasektionen (Computer Science Chapter), 2010

JACOB HÅKANSSON

I was a part of the organization which arranges many events for the new computer science students at the Royal Institute of Technology (KTH)
